Projects

Attentify   Nov 2023

- Lead a team of four to develop "Attentify.", a productivity web app and chrome extension centered around aiding people with ADHD.
- Integrated floating notepads, Pomodoro timer, AI assistant, and a Google Calendar integration which received praise from users and judges.
- Utilized Open AI API to help simplify tasks into smaller steps, provide study guidance, and quiz users on topics to help them succeed.
- Utilized GitHub's merge conflict resolution tools to ensure that the codebase was always up-to-date and free of errors.

Clocky   Sep 2023

- Developed "Clocky," a digital clock web application with real-time background and time format adjustments.
- Leveraged geolocation and the Sunrise Sunset API to fetch sunrise and sunset timings.
- Reduced Loading time to 0.9 secconds resulting in a Google Page Performance score of 99%
- Implemented dynamic features, including a 12-hour time display, background color transitions, and image changes to reflect different times of the day.
- Employed JavaScript functions & math to smoothly interpolate background colors, ensuring a seamless user experience.

Cyder App | IveyHacks   March 2023

- Created a mobile app prototype which won second place at IveyHacks.
- Worked with a team of five to make and pitch a business plan to the CEO's of Cyder.
